

Python_basic_programming_11

1. Write a Python program to find words which are greater than given length k ?

```
In [1]: def checkLengthOfString():
        in_string = input("Enter the string: ")
        in_length = int(input('Enter the length of the string: '))
        out_string = []
        for string in in_string.split(" "):
            if len(string) > in_length:
                out_string.append(string)
        print(','.join(out_string))

checkLengthOfString()
```

```
Enter the string: My name is Susmita
Enter the length of the string: 2
name,Susmita
```

2. Write a Python program for removing i-th character from a string ?

```
In [2]: def removeCharacter():
        in_string = input("Enter the String: ")
        in_char_num = int(input("Enter the ith Character: "))
        out_string = ''
        for ele in range(len(in_string)):
            if ele != in_char_num:
                out_string = out_string + in_string[ele]
        print(out_string)

removeCharacter()
```

```
Enter the String: ineuron
Enter the ith Character: 2
ieuron
```

3. Write a Python program to split and join a string ?

```
In [3]: def splitJoinString():
        in_string = input('Enter the string: ')
        print(f"Split String: {in_string.split(' ')}")
        print(f"Join String: {' '.join(in_string.split(' '))}")

splitJoinString()
```

```
Enter the string: Ineuron full Stack Data Science
Split String: ['Ineuron', 'full', 'Stack', 'Data', 'Science']
Join String: Ineuron full Stack Data Science
```

4. Write a Python to check if a given string is binary string or not ?

```
In [1]: def checkBinary():
    in_string = input('Enter the string: ')
    stun = 0
    for ele in in_string:
        if ele in ['0', '1']:
            stun = 1
            continue
        else:
            stun = 0
            break
    statement = 'is a binary string' if stun == 1 else 'is not a binary string'
    print(f'{in_string} {statement}')

checkBinary()
checkBinary()
```

```
Enter the string: 101010
101010 is a binary string
Enter the string: 1254
1254 is not a binary string
```

5. Write a Python program to find uncommon words from two Strings ?

```
In [2]: def unCommonWords():
    in_string_1 = set(input("Enter the String 1: ").split(' '))
    in_string_2 = set(input("Enter the String 2: ").split(' '))
    out_string = (in_string_1.union(in_string_2)).difference(in_string_1.
        intersection(in_string_2))
    print(out_string)

unCommonWords()
```

```
Enter the String 1: Susmita
Enter the String 2: Adhikary
{'Adhikary', 'Susmita'}
```

6. Write a Python to find all duplicate characters in string ?

```
In [3]: def duplicateChars():
    in_string = input('Enter the string: ')
    non_duplicate_list = []
    duplicate_list = []
    for ele in in_string:
        if ele not in non_duplicate_list:
            non_duplicate_list.append(ele)
        else:
            duplicate_list.append(ele)
    print(f'Duplicate characters are: {list(set(duplicate_list))}')

duplicateChars()
```

```
Enter the string: full stack data science course
Duplicate characters are: ['c', 'a', ' ', 't', 'l', 'u', 's', 'e']
```

In []: 7. Write a Python Program to check if a string contains any special character?

```
In [1]: def checkSpecialChar():
spl_chars = '[@_!#$%^&*()<>?/\|}{~:]'
in_num = input('Enter the string: ')
count = 0
char_list = []
for ele in in_num:
    if ele in spl_chars:
        char_list.append(ele)
        count = count+1
print(f'There are {count} Speical Characters in {in_num} which are{char_list}')

checkSpecialChar()
checkSpecialChar()
```

```
Enter the string: Data Science @ Ineuron by Sudhanshu & krish & Sunny
There are 3 Speical Characters in Data Science @ Ineuron by Sudhanshu & krish & Sunny which are['@', '&', '&']
Enter the string: Family
There are 0 Speical Characters in Family which are[]
```
